MOTIVATION

Why do I Focus on the Scope of “PETS”?

3 REASONS AROUSE MY CURIOSITY FOR THIS POTENTIAL ISSUE.

1. I'm a pet lover. I have raised 3 cats, but 2 of them passed away due to illness.
2. I work at pet technology company around 2 years.
3. One news I read a few years ago mentioned that Taiwan will become the next Japan, they predicts that the number of pets will exceed the number of people under 15 in 2021.

->(refer to attached image on the right hand)

日本早在2003年犬貓數就超過15歲以下的孩童人口，時勢研究追蹤推測，台灣將步日本後塵，預估於2020下半年出現黃金交叉，全台犬貓隻數將首度超過15歲以下孩童數，寵物經濟時勢所趨。

依2011至2017年的犬貓數及孩童人口平均年增減率進行推估，時勢研究預測2020年下半年全台犬貓數將首度超過15歲以下孩童數，於2021年達295萬隻，首次超過283萬名孩童。

根據內政部所公布的人口資料，國內15歲以下的孩童數在少子化浪潮下，每年以4%的急速下降；反之，農委會報告的全國犬貓隻數，卻逐年上升至2017年的251萬隻，比起兩年前成長10%。反映21世紀社會經濟發展的過程中，人口結構性變化與經濟壓力兩大因素推波助瀾。

15歲以下人口數 v.s. 全國犬貓隻數

Assuming the previous prediction is **true**, then the **upcoming problems** may be...

Problem 1

In Taiwan, do we have enough Veterinary Medical Institutions?

Problem 2

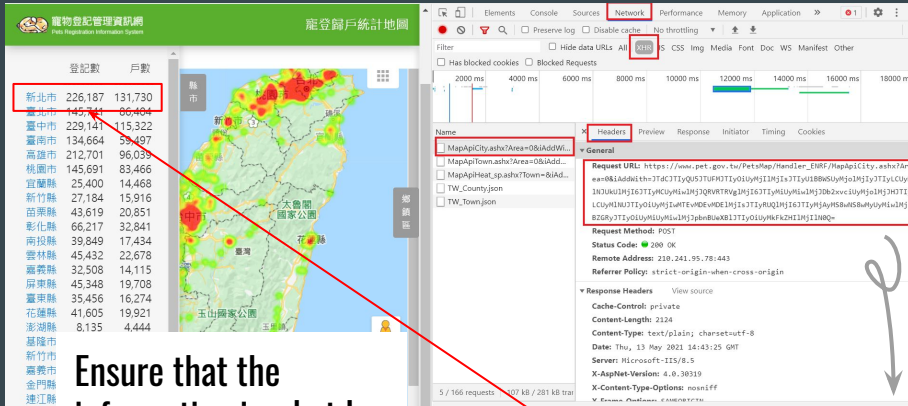

In Taiwan, is there a big gap between the service quality and professionalism of each Veterinary Medical Institution by different counties and cities?

Problem 3

Does every breeder have the concept of animal sterilization?

DATA COLLECTION and CLEANING

Raw data for “寵物登記數量”

Ensure that the information is what I need.

- Data period: 2011/1/1-2021/5/3
- Format: Json / Array
- Size : 22

petrig list 22 [{"CountyOrder":0, "CountyID": "A", "CountyName": "新北市", "HouseCnt":1317 ...

Find a way to get raw data with json file.

```
[{"CountyOrder":0,"CountyID":"A","CountyName":"新北市","HouseCnt":131730,"cnt":226187,"cnt1":0}, {"CountyOrder":1,"CountyID":"V","CountyName":"臺北市","HouseCnt":86404,"cnt":145741,"cnt1":0}, {"CountyOrder":2,"CountyID":"S","CountyName":"臺中市","HouseCnt":115322,"cnt":229141,"cnt1":0}, {"CountyOrder":3,"CountyID":"U","CountyName":"臺南市","HouseCnt":59497,"cnt":134664,"cnt1":0}, {"CountyOrder":4,"CountyID":"W","CountyName":"高雄市","HouseCnt":96039,"cnt":212701,"cnt1":0}, {"CountyOrder":5,"CountyID":"C","CountyName":"桃園市","HouseCnt":83466,"cnt":145691,"cnt1":0}, {"CountyOrder":6,"CountyID":"B","CountyName":"宜蘭縣","HouseCnt":14468,"cnt":25400,"cnt1":0}, {"CountyOrder":7,"CountyID":"D","CountyName":"新竹縣","HouseCnt":15916,"cnt":27184,"cnt1":0}, {"CountyOrder":8,"CountyID":"E","CountyName":"苗栗縣","HouseCnt":20851,"cnt":43619,"cnt1":0}, {"CountyOrder":9,"CountyID":"G","CountyName":"彰化縣","HouseCnt":32841,"cnt":66217,"cnt1":0}, {"CountyOrder":10,"CountyID":"H","CountyName":"南投縣","HouseCnt":17434,"cnt":39849,"cnt1":0}, {"CountyOrder":11,"CountyID":"I","CountyName":"雲林縣","HouseCnt":22678,"cnt":45432,"cnt1":0}, {"CountyOrder":12,"CountyID":"J","CountyName":"嘉義縣","HouseCnt":14115,"cnt":32508,"cnt1":0}, {"CountyOrder":13,"CountyID":"M","CountyName":"屏東縣","HouseCnt":19708,"cnt":45348,"cnt1":0}, {"CountyOrder":14,"CountyID":"N","CountyName":"臺東縣","HouseCnt":16274,"cnt":35456,"cnt1":0}, {"CountyOrder":15,"CountyID":"O","CountyName":"花蓮縣","HouseCnt":19921,"cnt":41605,"cnt1":0}, {"CountyOrder":16,"CountyID":"P","CountyName":"澎湖縣","HouseCnt":4444,"cnt":8135,"cnt1":0}, {"CountyOrder":17,"CountyID":"Q","CountyName":"基隆市","HouseCnt":11356,"cnt":21908,"cnt1":0}, {"CountyOrder":18,"CountyID":"R","CountyName":"新竹市","HouseCnt":11896,"cnt":20141,"cnt1":0}, {"CountyOrder":19,"CountyID":"T","CountyName":"嘉義市","HouseCnt":7169,"cnt":13697,"cnt1":0}, {"CountyOrder":20,"CountyID":"Y","CountyName":"金門縣","HouseCnt":5081,"cnt":9612,"cnt1":0}, {"CountyOrder":21,"CountyID":"X","CountyName":"連江縣","HouseCnt":475,"cnt":845,"cnt1":0}]

DATA ANALYSIS and VISUALIZATION

Major Packages

Requests

Selenium

Pandas

Folium

Folium

matplotlib

Matplotlib.pyplot

- 全台目前已登記的犬貓數量 **超過157萬**
- 每個家庭平均飼養 **超過1隻**
- 登記**最多**數量縣市為台中市
- 登記總數**超過平均**的縣市集
中在**六都**
 - 六都內北部縣市每戶平均登記數**低於**平均
 - 六都內中南部縣市每戶平均登記數**高於**平均

基於上述,可得出以下推論

- 登記總數和人口分布 (或經濟條件)有一定程度關係
- 每戶平均登記飼養數與居住環境型態有一定程度關係

台灣寵物飼養登記概況

全台已登記寵物數量

1570970

平均各縣市登記隻數

71407.7 隻

全台總登記戶數

807010

平均各縣市登記戶數

36682.3 戶

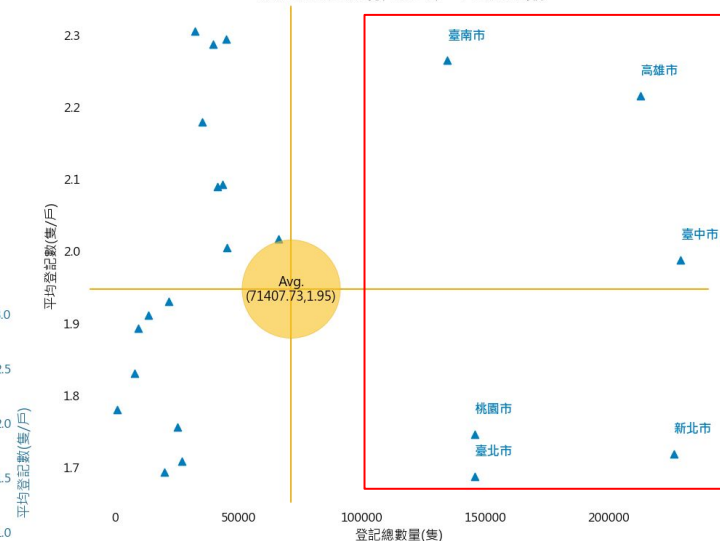

每戶平均登記隻數

1.9 隻

縣市分布概況

各縣市 登記總數 v.s 每戶平均登記數

- 全台合法登記獸醫院所共 **1910**間
- 平均各縣市有 **91**間獸醫院所
- **最多**合法獸醫院所數量的為 **台中市**
- 平均每間獸醫院所需要負載的犬貓數量為 **822.5**隻

→ 延伸問題: 一間獸醫診所實際能負載數量是多少呢?

基於上述,將台灣獸醫醫療資源依縣市做以下分級

I. 嚴重不足:(紅)

連江縣
金門縣
澎湖縣
台東縣

II. 部分不足:(橘)

III. 待觀察:(黃)

桃園市
高雄市
新北市
台中市

台灣獸醫院所資源概況說明

In Taiwan, do we have enough
Veterinary Medical Institutions?

Unsure, Need more data to validate.

- 延伸問題: 並非每間獸醫院所都有獲得評價,且每間獸醫院所獲得評價個數不一,會導至分析結果與實際有一定誤差存在

I. 需有立即檢視與改善：(紅)

新北市
桃園市
高雄市
台東縣
苗栗縣

II. 需進一步調查: (黃)

宜蘭縣
屏東縣
彰化縣
南投縣
雲林縣
嘉義縣

III. 繼續保持：(綠)

Google評論分數平均

4.29

被評價獸醫院所數量

基隆市	1	3	13	3
宜蘭縣	1	2	12	10
苗栗縣	1	11	12	11
嘉義縣	1	3	11	35
臺東縣	0	4	7	5
南投縣	1	7	7	12
金門縣	0	0	2	2
澎湖縣	0	1	1	2

In Taiwan, is there a big gap between the service quality and professionalism of each Veterinary Medical Institution by different counties and cities?

Unsure, Need more data to validate.

- 全台平均絕育率**68.02%**
- 飼主願意讓貓貓絕育的意願**高於**狗狗
- 絕育觀念**最好**縣市為台中市

→ 延伸問題: 絕育率達到幾%才算合格?
此外,貓狗各別的絕育率可以明顯看出飼主對於狗狗可能存有一種期待心理

基於上述,就目前結果將台灣獸醫院所服務評價做以下分級

I. 立即改善,提升絕育率:(紅)

新北市,高雄市
新竹市,苗栗縣
基隆市,澎湖縣
金門縣,連江縣

II. 貓/狗絕育觀念需再宣導:(黃)

宜蘭縣,花蓮縣
台東縣,彰化縣
新竹縣,台南市
嘉義市,桃園市

III. 絕育觀念優於其他縣市:(綠)

全台寵物平均絕育率

68.02%

平均絕育率(狗狗)

53.74%

平均絕育率(貓貓)

82.30%

各縣市絕育率概況

CHALLENGE and LEARNING

Challenge 1 Raise an http error : 429

What is the HTTP 429 Error? error: 429

Uncertain definition of too many times
The HTTP 429 error is returned when a user has sent too many requests within a short period of time. The 429 status code is intended for use with rate-limiting schemes.
Uncertain definition of a short period

Workaround:

>> Execute the code in next day.

>> Save into csv in batches(every 200 requests) to prevent sudden http errors happening again.

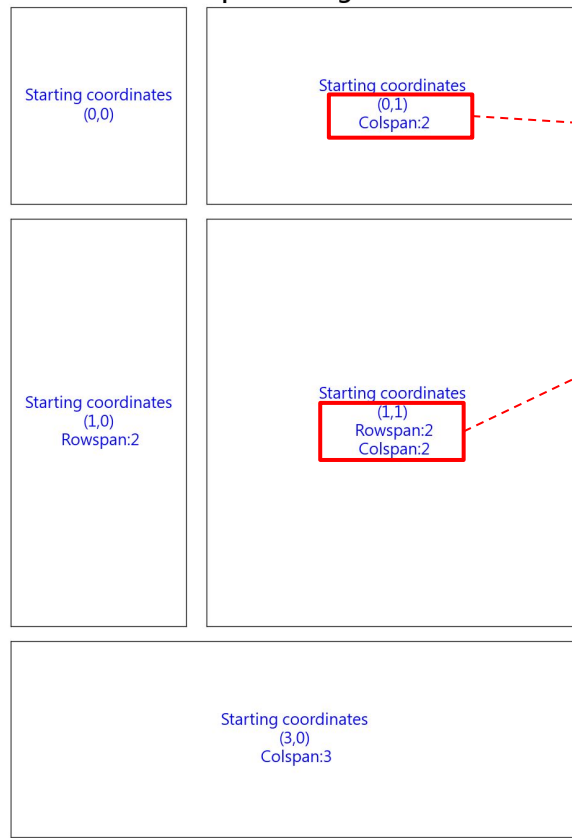

```
#Google Review
for i in range(0,1910):
    print(pd_VMI.iloc[i,4])
    pd_VMI.iloc[i,7]=GoogleReviewScore(pd_VMI.iloc[i,4], 'span', 'Aq14fc')
    if i%200==0:
        pd_VMI.to_csv('pd_VMI.csv',index=False)
        time.sleep(0.08)
pd_VMI.to_csv('pd_VMI.csv',index=False)
```

Learning 1 How to adjust subplots layout in one figure

Figure-1

Comparison Figure-1

```
'''Create Figure-2 Comparison'''
fig=plt.figure(figsize=(8,12),dpi=120)
#set font
plt.rcParams['font.sans-serif'] = ['Microsoft JhengHei']
#subplot layout (row=4, col=3)
#rowspan=1 colspan=1 : default
ax0= plt.subplot2grid((4,3),(0,0))
ax0.text(0.5,0.5,'Starting coordinates\n(0,0)',
        fontsize=15,c='blue',ha='center',va='center')
ax1= plt.subplot2grid((4,3),(0,1),colspan=2)
ax1.text(0.5,0.5,'Starting coordinates\n(0,1)\n Colspan:2',
        fontsize=15,c='blue',ha='center',va='center')
ax2= plt.subplot2grid((4,3),(1,0),rowspan=2)
ax2.text(0.5,0.5,'Starting coordinates\n(1,0)\n Rowspan:2',
        fontsize=15,c='blue',ha='center',va='center')
ax3= plt.subplot2grid((4,3),(1,1),rowspan=2,colspan=2)
ax3.text(0.5,0.5,'Starting coordinates\n(1,1)\n Rowspan:2\n Colspan:2',
        fontsize=15,c='blue',ha='center',va='center')
ax4= plt.subplot2grid((4,3),(3,0),colspan=3)
ax4.text(0.5,0.5,'Starting coordinates\n(3,0)\n Colspan:3',
        fontsize=15,c='blue',ha='center',va='center')
subplot_list1=[ax0,ax1,ax2,ax3,ax4]
for s1 in subplot_list1:
    s1.set_xticks([]) # 不要顯示x軸刻度
    s1.set_yticks([]) # 不要顯示y軸刻度
fig.suptitle('Comparison Figure-1',
            fontsize=24,fontweight='bold') # 整張圖的title
fig.tight_layout()
plt.savefig('subplot_2.png')
plt.show()
```

Learning 2 How to plot a Map

Collect latitude and longitude data

1

```
#臺灣地圖前置作業
Latlongi=[]
bsObj=BeautifulSoup(rqResponse(taiwancity,linktype='wb'),'Lxml')
data= bsObj.find_all('tr')
for i in range(len(data)):
    new=data[i].text.split('\n')
    Latlongi.append([new[2],new[5],new[8]])
```

                                ).add_to(national_map)
        elif (rc>avggr)and(rr<avggrrate):
            folium.CircleMarker(location=[lat, lng],radius=radius,
                                fill=True,fill_opacity=0.7,
                                color=colors[3],opacity=0.9,
                                fill_color=colors[3],
                                popup=popup,
                                #popup='%s\n合法獸醫院所: %d 間'%(city,label),
                                ).add_to(national_map)
        elif (rc<avggr)and(rr<avggrrate):
            folium.CircleMarker(location=[lat, lng],radius=radius,
```

Need to save into html, and use browser to view it.

3

```
national_map.save('map_pet_medical_service.html')
```

Learning 3 Write data into DB during crawler

Create a DB

```
'''建立db準備'''  
#連線指定資料庫  
conObj = sqlite3.connect('Project2021_pet.db')  
timestamp=datetime.now().strftime('%Y-%m-%d %H:%M:%S')  
print('%s: [Info]Successfully connect to db'%timestamp)  
#建立cursor物件  
cursor = conObj.cursor()
```

1

Create a Table and Columns

```
html = driver.page_source  
bsObj = bs(html, 'lxml')  
petType = bsObj.find_all(class_='form-check-input')  
table = bsObj.select_one('#CountTown') #貼上 css selector路徑  
df = pd.read_html(str(table)) #有可能抓到不只一個表格, 會以串列方式儲存  
df[0] = dataclean(df[0], delindex=[22], incol=[{'petType': [1, petType[count+1].get('id')]}])  
#將columns name作成list  
columns = df[0].columns.values.tolist()  
#建立資料表, 輸入SQL語法, 此語法被視為字串在py內  
sqlString = '''CREATE TABLE IF NOT EXISTS petSterilization(  
    "{0}" TEXT,  
    "{1}" TEXT,  
    "{2}" INTEGER,  
    "{3}" INTEGER,  
    "{4}" INTEGER,  
    "{5}" INTEGER,  
    "{6}" INTEGER,  
    "{7}" INTEGER,  
    "{8}" INTEGER,  
    "{9}" INTEGER,  
    "{10}" FLOAT,  
    "{11}" FLOAT  
    )'''  
sqlString = sqlString.format(columns[0], columns[1], columns[2], columns[3],  
    columns[4], columns[5], columns[6], columns[7],  
    columns[8], columns[9], columns[10], columns[11])  
#print(sqlString)  
cursor.execute(sqlString)  
timestamp=datetime.now().strftime('%Y-%m-%d %H:%M:%S')  
print('%s: [Info]Successfully create table and columns'%timestamp)
```

2

Write logs. Finally, open db to check again
